

Interest and interest rates explained

1. What are they?

Think of interest as being the cost of borrowing money.

The **RATE** of interest is the size of that cost. The higher the rate, more it costs. Lenders charge different rates.

Lenders charge different rates.

Interest can also be applied to your savings.

Interest is applied to different types of loan. This means you pay back more than you borrowed - the **loan plus the interest**.

Mortgages

Credit cards

Car loans

Hire-purchases

Personal loans

2. Who decides the interest rates?

The Bank of England sets the Base Rates (reviewed on a regular basis).

This affects the interest rates set by the lenders. If the Base Rates go up, it's likely that lenders will charge more and vice versa.

Why is this important?

The higher the interest rate the higher the interest paid.

3. How interest rates affect you mortgage?

When you **borrow money** for a home, you are also **charged interest**. The rate of interest will affect how much money you pay back overall and each month.

Capital  = The money you have borrowed for the mortgage

Interest  = The cost of borrowing the capital

Interest rate % = The size of the interest cost. This can go up or down

There are two main types of mortgages...

1. Repayment mortgage

Monthly payments:  Interest +  Capital instalment

2. Interest only mortgage

Monthly payments:  Interest

Full capital is paid at the end of your mortgage term

 Different lenders charge different rates depending on the amount you borrow

Example scenario >

Mortgage: £150,000

Interest rate: 5%

Term: 25 years

1. Repayment mortgage - monthly payment

At the end of your mortgage term you don't have to pay anything.

OR

2. Interest only mortgage - monthly payment

At the end of your mortgage term **you still have £150,000 (capital) to pay.**

4. What types of rates are out there?

Whatever your mortgage option is, you can then choose between...

Fixed rate

Your payments stay the same. You pay off the interest at fixed amount every month for a set period of time.

Variable rate

Your payments will go up or down, as the interest rate changes. There are various options such as tracking against the base rate.

Fixed term (2, 3, 5 years)

Fixed monthly payments

Over your mortgage term

Varied monthly payments

5. Things to keep in mind

Loan to Value (LTV) explained

The amount you are borrowing in relation to the value of the property.

When you buy a property, you put down a deposit. Having a higher deposit means you'll borrow less of the capital.

LTV: 85%

Interest rate: 5%

LTV: 70%

Example

Property value £172,500

Lower rate: 3.5%
